Payal Raviya

Frontend Developer

I have 3 year of experience in my career. Proficient in HTML5, CSS3, and JavaScript, with expertise in modern frameworks such as React and Vue.js. Familiarity with version control systems like Git, facilitating collaborative development. Strong problem-solving skills and the ability to troubleshoot and debug complex frontend issues. Passionate about staying up-to-date with the latest frontend development trends and best practices. In some projects I worked with backend also like Golang, Laravel, Python, Sail JS.

Experience

Jan 2022 - current
Improwised Technologies Pvt Ltd
Software Developer
During my this experience i worked on many projects. Short summary of that is below:

Dart Scorboard

In this project, I have developed a Dart scoreboard using Vue 2 while also leveraging the Bootstrap framework to ensure a responsive and well-designed user interface.

Webauditor Logs

This system will collect server logs, and will generate reports , which will help website owner to optimise their web pages. This Project is in Nuxt 2 for frontend and bootstrap for responsive and well-designed user interface.

Tradersync

This project is related to stock markets trading. This project is in Vue 3 for frontend and Quasar for responsive and well-designed user interface. The ultimate stock trading journal that helps you improve your trading performance.

Platform Engineering

Our company providing platform engineering services to client. So i worked on designing and maintaining that website with Nuxt and Bootstrap. In this website we also used Directus so our marketing team update site without any help of developer.

OpenCV Courses

This is fully static website with Hugo. This website is related to learn opencv course with the help of our experienced expert. Also in this site i implemented razorpay payment integration for payment.

Working as Frontend Expert during Freshers Training

I also worked as Frontend Expert in jan 2023 Batch. Give training and guidance in HTML, CSS, Bootstrap, Vue 3 , Nuxt 3, Pinia, VueX.

Wishyoo

This is internationnal client project for e celebration cards like birthday, annivarsary etc.. Its frontend is in react and backend is in sail js. I worked on both frontend and backend.

Cognyx

This is also international client project for create BOM(billing of material) for any product. I am currently working in this project. Its frontend is in Vue3 and backend is in laravel and i am working in both backend + frontend.
